

When installing a new transmission, shifter feel and performance are important considerations for many people. Our STX™ billet shifter provides that nice, tactile feel that only a direct mount shifter can provide. Not only do you feel more connected to the transmission, the positive spring biasing makes that 2-3 upshift a breeze.

Our shifter has been designed to maintain very tight tolerances so you don't have any excess play found in many aftermarket shifters.

**Now available on most PerfectFit™  
and RestoFit™ SST TREMEC® TKO  
transmissions**

- Positive dual spring biasing for easy 2-3 upshifts
- Rock solid steel and aluminum component design
- Compact design is less intrusive
- Generation 6 now in production. Previous versions have been installed on thousands of overdrive conversions over the past decade.
